KOMPAN OUTDOOR FURNITURE

Outdoor Furniture plays an important role in our communities, by adding an inviting and social atmosphere, a place to meet and socialise, or simply to get a moment of rest.

An inspirational site

The social and inclusive playground

WALKWAY

Inviting WALKWAY for better accessibility, including resting places. Benches with backrest are placed outside the walkway on hard surface with space for wheelchairs next to the benches, according to inclusive guidelines. A good rule of thumb is to position the benches every 25m along the walkway for increased accessibility, aligned with furniture standards for inclusion and accessibility.

SOCIAL AREA

The SOCIAL AREA makes room for more families to have a picnic break while visiting the playground. This adds a great social atmosphere, attracts more visitors and makes them stay longer. Inclusive furniture is placed on hard surface according to inclusion and accessibility standards.

NEARBY PLAYZONES

Seating NEARBY PLAYZONES makes it easy for parents and caregivers to watch the children play while still being able to socialise and interact. Benches without backrest are used with the advantage of being non-directional.

Inclusive design as standard

The UN Convention on the Rights of Persons with Disabilities (CRPD) requires using universal design principles when creating public spaces. Installing AGORA furniture in a public area goes beyond satisfying all inclusive design requirements.

AGORA's inclusive design allows people using a wheelchair to fully access the table and get the same social experience as people without disabilities.

Ergonomics and accessibility

Outdoor seating is a natural part of the strategy to make cities and public spaces more accessible and attractive.

This is all the more important since the elderly population has expanded. To meet this trend, new standards have been made that make the existing solutions obsolete.

The AGORA product line surpasses every detail for inclusivity and accessibility standards. The armrest, for instance, is an integral part of the structure while also providing a firm grip and support to users. The seat and backrest are ergonomically designed and engineered to fit all users.

AGORA'S INCLUSIVE DESIGN

Has an open and natural feel, a place without barriers for meetings without boundaries.

AGORA

AGORA is developed according to the latest inclusive design principles for outdoor furnishing without compromising on design qualities. KOMPAN truly believes in making public spaces more attractive and accessible for all.

AGORA Hangout

AGORA HANGOUT offers a casual and informal seating opportunity suitable for most places. For example to give walkers a short break along a walkway, or children a cool hangout spot in a schoolyard. Or what about a comfortable spot for watching sports? The design leaves a small footprint, making it ideal for narrow places or environments where space optimisation is key.

Natural impregnation without chemical additives makes Siberian larch very durable in a natural way.

EUTR-certified / in compliance with the European Timber Regulation. AGORA / RUMBA wood profile thickness: 40mm

Siberian larch ages with patina and develops into a beautiful silver grey colour over time.

Materials

Durable and low maintenance

KOMPAN outdoor furniture comes in durable and robust designs. All manufactured in low-maintenance materials for long-lasting outdoor solutions.

Classic wood

High-quality and impregnated pine – or high-quality hardwood – in combination with hot-dip galvanised steel.

High-pressure laminate (HPL)

HPL is a paper fibre and wood pulp composite compressed with glue under high pressure and high temperature. HPL panels consist of a strong multilayer construction, durable and suitable for outdoor use. High UV stability, high resistance to impacts, scratches, fire, water and humidity due to advanced technology. Does not decompose and can be cleaned easily.

AGORA PICNIC HPL thickness: 18mm (+HDG steel reinforcement)

Hot-dip galvanised (HDG) steel

Steel components in outdoor environments require protection against corrosion. KOMPAN use HDG steel parts, and painted steel parts are HDG and powder-coated. Main advantage of HDG surface is the self-healing properties when exposed to scratches or similar.

Steel grade 235. Screws and fasteners in stainless steel.

AGORA PICNIC tube dimension: \varnothing 48.3x3.2mm

AGORA STEEL (perforated steel) sheet thickness: 4mm
